

How to pin a website to Android Homescreen

1. Start by opening your internet browser. Go to address (<https://alabama.webeocasp.com/alabama/>)
2. Once it loads tap the menu button, and tap Add to homescreen
3. That's all there is to it. The bookmark is pinned to the homescreen for quick access. Arrange it into the place of your liking.

Add Web Site Bookmarks to Your iPhone's Homescreen

1. First, go to the website you want to save to the home screen in the Safari browser. **Example:** (<https://alabama.webeocasp.com/alabama/>)
2. Next, tap the Share button. This is the button immediately to the right of the address bar. (“Depending on the IOS you have this button could be at the bottom of the browser.”) It looks like a box with an arrow coming out of it.
3. You should see "Add to Home Screen" in the second row of buttons. It has a big plus sign in the middle of the button and is right next to the "Add to Reading List" button.
4. After you tap the Add to Home Screen button, a window will appear with the name of the website, the web address and an icon for the website. You shouldn't need to change anything, but if you want to give the website a new name, you can tap on the name field and enter anything you want.
5. Tap the Add button in the top-right corner of the window to complete the task. Once you tap the button, Safari will close and you will see an icon for the website on your home screen.
